

Supplementary Figure 5. Case 4: The chest X-rays and computed tomography showing multi-focal ground-glass opacities in the lung fields bilaterally (A), lung ultrasound findings and aeration scores compared with chest X-rays were changed with 3 (in anterior areas only) on admission day (B), 5 (in intubated state) on day 4 (C), and 13 (in extracorporeal membrane assisted state) on day 18 (D).
