

## Supplementary Table 2. The response rate for symptoms at 4 and 7 days after medication

	At 4 days after medication	At 7 days after medication
DW1601 (n = 67)	52 (78.8)	67 (100)
DW16011 (n = 70)	41 (60.3)	60 (85.7)
P. sidoides (n = 64)	34 (53.1)	55 (85.9)
Difference (95% CI) <sup>a</sup>	18.5 (3.25–33.74)	14.3 (6.09–22.48)
Difference (95% CI) <sup>b</sup>	25.7 (9.95–41.37)	14.1 (5.55–22.58)
p value <sup>c</sup>	0.020 <sup>a</sup>	0.001ª
p value <sup>d</sup>	0.002ª	0.002ª

Values are presented as number (%). The improvement rate for symptoms was defined as total bronchitis severity score (BSS)  $\leq$  3 or reduction of total BSS  $\geq$  7.

P. sidoides, Pelargonium sidoides; CI, confidence interval.

<sup>a</sup>The difference was calculated as the value in the DW16011 group minus the value in the DW1601 group.

<sup>b</sup>The difference was calculated as the value in the *P. sidoides* group minus the value in the DW1601 group.

<sup>c</sup>p value was calculated using Pearson's chi-square test for the difference of score between DW1601 and DW16011 groups.

<sup>d</sup>p value was calculated using Pearson's chi-square test for the difference of score between DW1601 and *P. sidoides* groups.
